NOR-EX Ice Engineering Inc. offers comprehensive and proven Design, Operational Planning and Risk Management solutions to ensure Safety and to Optimize Operations for organizations working on ice.

NOR-EX combines Canada's leading experts in Ice Engineering and Ice Road Planning, Construction and Operations to provide full service consulting in the development of customized Ice Road/Ice Platform Management Systems in support of resource exploration, community resupply, and other remote access logistical challenges in Canada's North.

NOR-EX will add value to the planning, design, construction and operations of safe, reliable, economical and operationally efficient ice structures (ice roads, winter roads, ice pads, airstrips) for transportation and exploration projects.

WHAT SETS NOR-EX APART?

An unparalleled combination of experience in engineering, construction and operations enables:

- Peace of mind for clients that they are benefitting from industry leading experience, safety and innovation
- Customized designs to reduce costs and mitigate financial risk
- Comprehensive quality assurance for construction and operations
- Strong hazard controls to enhance safety
- Extending operating seasons through comprehensive monitoring and control measures

NOR-EX works closely with your organization to understand your operational needs and to develop dependable and predictable solutions to keep your work force safe while saving you time and money.
